Subject: [Gasification] RE: Water Heaters

Hey Jeff,

Look in the Files section of the Yahoo Wood Gas group.

I am working on a downdraft space heater made of 50 gal. drums and 3/8" plate. If you can cut and weld, you can build one. The first 50 gal. drum is the feed hopper and burner. The second 50 gal. drum is just a heat exchanger. You could build the hopper/burner and pipe the output directly to your boiler or build a boiler into the second drum.

Click on the link: "CLICK_ON_ME.HTML" and your browser will load a new web page. I'm just about ready to change the documentation again, as I've made some improvements to the burner design. Stay tuned!

(http://groups.yahoo.com/group/WoodGas/files/Heating_Stove/)

Good Luck and take care... tony
